

Contractor Stormwater Compliance Agreement

Snow Removal Contractors and Staff will abide by the following:

- Prevent excessive deicer materials from entering the site's stormwater conveyance system.
- Do not clean equipment by stormwater inlets or curb and gutters.
- Prevent fuels or hydraulic fluids from spilling onto or into curbs / gutters, or stormwater systems.
- If a hydraulic line ruptures, cleanup the spill immediately with oil dry, sweep or scoop up and dispose of properly.
- No dumping of snow or deicer products into open storm drains or into natural streams on site.
- Properly dispose of leaf litter and grass clippings in appropriate places such as composting centers or similar sites.
- Report to the municipality and/or appropriate city/village/school district representative any observance of these occurrences so proper cleanup action can take place.
- Do not plow snow into bio-swales or rain gardens on this site. Placement of snow will compress the amended soils in these best management practices and prevent them from functioning properly in the future, ask the site manager if these structures are present.

I have read and understand the above items and will make every effort not to create a situation that may cause the impairment of stormwater on this site. I ensure to perform all municipal operation and maintenance activities, so they comply with all pollution prevention and good housekeeping Best Management Practices (BMPs) as deemed appropriate. This information will be communicated to our employees, and I take responsibility for their actions.
