

Date Issued: April 16th, 2026

The Reportable Disease Update has been developed to communicate infectious disease information to community healthcare professionals. This update will be distributed quarterly to identify and communicate issues, trends in the community, and emerging communicable diseases that can impact our community.

Information Items:

- Measles cases continue to be reported in Michigan, with an active outbreak in Washtenaw County. There is growing concern about community transmission in Southeast Michigan, particularly following a recent case in Monroe County with no known travel history or identifiable epidemiologic link. The Michigan Department of Health & Human Resources (MDHHS) is advising early Measles, Mumps, Rubella (MMR) administration for infants aged 6-11 months who meet the following criteria:
 - Residents of Washtenaw, Monroe, Lenawee, Livingston, Jackson, Oakland, and Wayne counties **OR**
 - Travel to Washtenaw or Monroe counties
 - This is a temporary recommendation that extends to May 16, 2026. This window may be extended if new cases are identified. An early dose of MMR will NOT count towards the two-dose series. The infant will still require doses at 12-15 months and 4-6 years per the standard schedule. Healthcare providers should speak with parents about the benefits and risks of an accelerated dose for infants that meet criteria.

View case counts and updated recommendations at Michigan.gov/measles.

Please see the table on the next page for counts of reportable diseases for 2026.
